This is Lisu, taken from an actual text where "(Committee)" was in fact displayed in Times within the Lisu text. Lisu is not "just Latin with extensions". Many Latin fonts would be impossible to use for Lisu where they would be perfectly acceptable for every other script that used Latin (modulo Turkish dotless ı and so on).

These are not Lisu; Lisu readers do not, Martin Hosken tells me, consider these to be correct representations of their script. They may use font styles decoratively. I have not seen any examples.

These lower-case are definitely not Lisu; Lisu readers would not even recognize them. There are intolerable similarities: bpᑫdᑫ (BPᑯDBᑯ); nunll (NUꓵLꓶ) and alien shapes: ꝛⅎꞡfꟻ (ꓣꓘGꓯFꓱ).
